## PERSONAL PROFILE

---

Inquisitive and passionate software engineer, currently working at Visa Inc. Working in enterprise software development and payments industry for the past 5 years. Passionate about open-source software and contribute to OSS projects in my spare time.

## EXPERIENCE

---

### Visa Inc

May 2024 – Present

*Software Engineer - OVN [Open Visanet] Authorisation*

*Reading, United Kingdom*

- Designed and implemented functional workflows for transaction processing as part of an ongoing effort to modernise the VisaNet payments platform with end to end functional parity for multicurrency and payment authorisation based on ISO8583
- Delivered scalable features in an event-driven distributed microservices ecosystem using Kafka, gRPC, Golang, Cassandra, and IBM DB2, improving system latency and reliability
- Alongside delivering product prioritised features for the overall project, actively involved in the in house GENAI team to develop internal tools for helping developer experience and productivity. eg - PR Review bot, bug-analysis bot
- Took ownership for deployment and lifecycle management of AI powered bug-analysis bot, acting in a pseudo devops role leveraging lightweight and preinstalled tools like systemd timers, Git, Podman CLI - with a personal goal of keeping external dependency bloat to minimum while matching the informal uptime SLA
- Mentored junior engineers during their on-boarding process helping them get familiarised with OVN tech stack and business context

### WEX Inc

March 2021 – April 2024

*Software Engineer - Fleet and EV Card Payments*

*London, United Kingdom*

- Took ownership and modernised an incomplete legacy .NET based internal tool for archiving documents. Designed and developed multi-client solution for the application with client-specific role based access using Okta OIDC
- Responsible for a greenfield project to provide a homogenised solution for embossing payment cards that combines different services provided by different internal teams and organisations and deployed it using Github Actions, Helm Charts, Argo CD, Hashicorp Vault in Kubernetes
- Streamlined the delivery of microservices stack based on Java, SpringBoot and Docker by introducing telemetry and service discovery solutions using Consul Connect, Prometheus, Grafana and Alert Manager
- Took responsibility for EMEA pilot delivery, including designing and developing for various requirements involving different teams and internal organisations, demonstrating improvements in delivery time of 20%.
- Assumed ownership of an in-house framework for running batch jobs based on Cron Scheduler built in JBoss Java server. Reduced scheduling costs in the EMEA delivery by completely replacing and improving upon the proprietary scheduler

### Secure Meters Ltd

July 2020 – February 2021

*Graduate Electrical Engineer*

*New Delhi, India*

- Researched electricity and business-related policies in South-East Asia. Handled the demands of different clients with the appropriate Meter technical specifications as per the International IEC Standards as required
- Consistently liaised with stakeholders in Thailand, Malaysia, Indonesia and Myanmar to keep up with changes in local electrical standards and follow the developments of RCEP 2021

## TECHNICAL SKILLS

---

**Languages:** Java/J2EE, TypeScript, Python, HTML/CSS, SQL, Go, C#

**Frameworks:** Spring Boot, .NET, Angular, JUnit, Mockito, MongoDB, Kafka, Flutter

**Developer Tools:** Git, Docker, Kubernetes, Consul, Prometheus, Liquibase, Linux, Maven, Helm Charts

## EDUCATION

---

**Guru Gobind Singh Indraprastha University, New Delhi**

Aug 2016 – Sep 2020

*BTech Power Engineering*

*8.2/10*

# OPEN SOURCE CONTRIBUTIONS

---

## **containers/podman**

June 2023

*Golang, Git, Docker, make*

<https://github.com/harikannan512/podman>

- Enhanced Podman's systemd generator, "quadlet", enabling the recursive parsing of user-defined systemd unit files. This empowers users to efficiently organize their unit files according to their specific requirements.

## **open-policy-agent/opa**

January 2023

*Golang, Git, Docker*

<https://github.com/harikannan512/opa>

- Fixed a bug with 'opa inspect' command which failed worked for UNIX based OSes but failed on Windows due to an issue in path separator in identified drive name)

## **buildpacks/pack**

December 2022

*Golang, Git, Docker*

<https://github.com/harikannan512/pack>

- Added functionality to the "pack" command-line tool, enhancing it to display Extensions, particularly as part of Extension enhancement Phase-I
